HEATING DEGREE DAY EXPLANATION

A heating degree day is defined as 65 degrees Fahrenheit minus the daily average of the high and low temperature.

For Example: Take the high for the day and the low for the day and calculate the average temperature.

If the average is below 65 you have a heating degree day.

If the average is above 65 you have a cooling degree day.

High for the day	40
Low for the day	<u>20</u>
Total	60
Average	30

Heating Degree Day 65-30=35
